

LogMeIn Services on the Digital Marketplace

G-Cloud UK

Trusted by businesses worldwide, UK public sector organisations can now procure LogMeIn's easy-to-use portfolio of cloud-based communication and collaboration, identity and access, and customer engagement and support solutions. LogMeIn's products allow people to connect with each other worldwide to drive meaningful interactions, deepen relationships, and create better outcomes for individuals and businesses. They are now available directly through the G-Cloud CloudStore.

Across the globe, public sector organisations already innovate and transform with LogMeIn solutions, including GoToConnect, GoToMeeting, GoToWebinar, Rescue, LastPass and Bold360 on a subscription-based model.

LogMeIn on the G-Cloud 11 Framework

The G-Cloud Framework supports a 'Cloud First' approach by the UK government and is fundamentally changing the way UK public sector procures information technology to improve. Its catalogued list of suppliers simplifies the procurement process and provides easy access to approved cloud technologies. The G-Cloud Framework enables public sector bodies to procure commodity-based, pay-as-you-go cloud services on government approved short-term contracts through an online catalogue called the 'Digital Marketplace'.

LogMeIn is proud to be listed as an approved supplier on the G-Cloud 11 Framework with six services listed at this time. The solutions that LogMeIn delivers to the UK public sector are proven to reduce operating costs and support the UK government's agenda for 'Digital and Cloud First', whilst ensuring availability and reliability for our customers' key enterprise systems.

LogMeIn's G-Cloud 11 Service Listing

LogMeIn is now offering the following services through G-Cloud 11 under the 'Cloud Software' category:

- The Bold360 is an intelligent AI-enabled customer engagement solution that allows companies to provide the customer experience of the future today. Whether it's empowering front-line employees, helping customers seamlessly move through the sales cycle or helping customers answer questions in near real-time, Bold360 puts AI to work to improve customer experience and support.
- GoToMeeting provides a fast, easy and reliable online meeting solution designed to power workforce productivity. Leveraged by many government customers around the world, GoToMeeting is trusted by millions of people every day for professional real-time virtual communication and collaboration.

- GoToWebinar is used daily by more customers than any other webinar solution and powers millions of webinars each year. Whether you use webinars for marketing, training or corporate communications, GoToWebinar makes it easy to engage your audience from anywhere and make the kind of personal connections that drive business. Get all the features and analytics you need to create the type of live or on-demand events you want.
- LastPass is a password management solution that simplifies access to enterprise applications for users and increases centrality and ease of management of access for administrators with task automation, convenient and secure password sharing, and other features. In addition to its superior password management technology, LastPass for Business **recently launched** a new comprehensive identity solution. By combining EPM, SSO, and MFA into a single cloud-based identity solution, it addresses many of the pain points that both IT teams and employees highlight with security solutions.
- Rescue is a SaaS based service to offer premium remote support that solves every problem seamlessly and securely on PC, Mac, iOS and Android. Rescue is remote support for a world without barriers.
- GoToConnect is an intuitive, fully unified collaboration platform that offers best-in-class web, audio and video conferencing, presence, VoIP calling, SMS/text messaging, visual voicemail and more in one application. The platform is fully integrated, allowing users to easily switch between different modes of communication – and communicate internally and externally – via a web browser or desktop app.

Governments Around the World Transform with LogMeIn

LogMeIn has grown to become one of the world's top 10 SaaS companies with a leadership position in every one of our markets. LogMeIn's leading cloud computing technologies are helping government organisations to streamline internal processes, collaborate across departments, and engage with the public to deliver immediate value, break down barriers to innovation, and eliminate wasteful IT spending. With a platform that supports tens of millions of daily users, over a billion customer interactions and twenty billion voice minutes per year, we have not only capitalized on but helped invent the modern way of working – flexible, dispersed, mobile, efficient and productive.
