

You now have complimentary access

to our Security Module which includes LogMeIn Antivirus powered by Bitdefender, Antivirus Management, Windows Updates, and Application Updates.

LogMeIn Central is more than a remote access tool, but we find that some of our customers still only use us for remote access.

You're currently in our [Base Plan](#) which enables you to manage your endpoint infrastructure from anywhere with secure HD Remote Access, User Management, Two-Factor Authentication, and more. However, our most powerful features are included in our custom modules.

As a valued Central customer, we've unlocked an exclusive free trial of our Security Module that you'll have full access to until your 2021 renewal. We've gotten a lot of positive feedback from our customers about our Security Module, and we want to give you a chance to explore this advanced feature functionality on your own time in your own environment, no strings attached.

Please note with this free trial, you have full access to our Security Module for over a year at no additional cost. Your Security Module free trial will expire upon your 2021 renewal. Prior to your 2021 renewal, you will have the option to purchase the Security Module. If you do not select to purchase the Security module, you will simply renew into your current subscription – Base Plan only.

Risk prevention

Increased security

Automated updates

Centrally managed

Explore the features included in the Security Module to take control and mitigate the risk of cyber threats.

Feature	Benefit
LogMeIn Antivirus powered by Bitdefender - Powerful antivirus with heuristic-analysis that protects from viruses, malware, ransomware, and sophisticated online threats	<ul style="list-style-type: none"> • Ensure your endpoints are protected with world-class security and control • Customize your antivirus protection with configurable policies • Consolidate your antivirus into Central for a single pane of glass view into your endpoint infrastructure • Give or rescind capabilities to users with Firewall protection
Antivirus Management - Easily monitor and manage antivirus software	<ul style="list-style-type: none"> • Request status updates, view a list of threats, initiate scans, and more • See all the issues that exist with a computer, a list of ways to solve those issues, and a quick link to remote into the computer to fix the errors • Manage the antivirus software you already have deployed or take advantage of our built-in antivirus license software and keep all your managed computers secure • Save time and money with antivirus software included within our Security module • Receive alerts if there are any threats • Manage antivirus software from a single dashboard • Identify which endpoints need updates or patches

Feature	Benefit
<p>Patch Management - Identify, approve and deploy patches to one or multiple devices. Also known as Windows and Application Updates.</p>	<ul style="list-style-type: none"> • Quickly identify vulnerable third-party applications and automatically deploy patches to keep your software up-to-date and protected against threats • Perform multiple updates simultaneously behind the scenes with no interruption to end users • Schedule and push out critical software updates during off hours • Automate software updates on remote computers to save time • Securely deploy Windows and Application Updates to out-of-date endpoints
<p>Windows Updates - Automatically update your systems at the same time or schedule updates when most convenient.</p>	<ul style="list-style-type: none"> • Centrally manage and view your Windows updates status, including when a new update is available • Provide service packs and patches for the Windows operating system and other Microsoft software • Update drivers for popular hardware devices
<p>Application Updates - Easily and automatically deploy third-party application updates to out-of-date devices</p>	<ul style="list-style-type: none"> • Get a clear view into out-of-date software and better manage your IT assets • Monitor computers for software that is outdated or at risk, including Adobe, Java, web browsers and more • Push software updates directly through the LogMeIn dashboard to all or select computers and groups • Manage and perform multiple updates silently without interruption to end users or remote computers • Automate software updates on remote computers to prevent future issues • Achieve greater insight into a broader array of software on every computer in your LogMeIn dashboard • Spend less time on maintenance and more time on strategy thanks to streamlined updates • Gain stronger confidence in the security of your endpoints through proactive management of issues • Increase flexible, efficient control over your networks with automated and scheduled updates

For a deeper dive into the above feature functionality, we encourage you to explore the following resources available to you:

- [Antivirus Management](#)
- [Windows and Application Updates](#) (also known as Patch Management)

What our customers are saying:

“Beyond LogMeIn Antivirus working so well, the biggest selling point was that the antivirus was included in our subscription in addition to the ability to remotely operate computers, manage inventory, receive alerts, deploy packages and more”

Bert Lamb, Redi Services LLC.
