

THE IMPACT OF HOSTED VOIP ON MOBILITY

These days, mobility isn't just a corporate buzzword – it's a business priority. And in an age where technology can easily empower productivity and facilitate collaboration, there's no reason why you should settle for substandard processes and systems that limit your team's agility. But more than any other technology introduced in the last decade, none has made a bigger impact on business mobility than Hosted VoIP.

The mobile business benefits that Hosted VoIP offers can't be matched by legacy systems. Let's explore them in-depth below.

1. Provides a reliable and cost-effective solution for on-the-go employees

One of the most well-known benefits of Hosted VoIP is its cost efficiency. Compared to legacy systems, Hosted VoIP offers businesses very minimal call rates and virtually eliminates local and long-distance charges. In addition, because it's offered following a SaaS-based platform, there's minimal overhead investment. Maintenance will be handled by the provider, so there's also no need to task an IT team with setting up and managing the system.

American consumers spend an average of five hours per day on a mobile device.

All things considered, setting up a Hosted VoIP system to support your team's mobility becomes significantly more cost-effective for organizations.

2. Offers access to useful workplace productivity features

Hosted VoIP is so much more than just technology that makes phone calls easier. While that's a big part of it – and a necessary one, given how often mobile teams need to communicate – Hosted VoIP is also known for its ability to boost productivity. Unified Communication (UC) tools, which are anchored on Hosted VoIP, help foster better collaboration through numerous available functionalities.

Browsing sessions on mobile apps are 3-4x longer than those on desktops.

Features such as shared workspaces, instant messaging and conferencing options can support the sharing of ideas, allowing teams to innovate beyond their desks. Employees can productively and conveniently work from any location.

3. Easy to deploy and manage

Hosted VoIP is easy to deploy. It utilizes software, which means there's no need for an upfront investment or space to accommodate hardware. It's simple to scale infrastructure up or down, depending on the size of your team.

7/10 global enterprises cite mobility as a top priority

This allows businesses to smoothly adopt Hosted VoIP and implement it in their organizations. This makes it more viable for businesses to offer work-from-home programs, to implement Bring Your Own Device (BYOD) programs or to hire globally.

4. Exceptionally flexible

Hosted VoIP offers exceptional flexibility for your business. The system can be conveniently integrated into existing programs that your office is probably already using. Available and existing devices can also be used to access a centralized interface for a streamlined and consistent communication and collaboration experience.

There's a difference between being wireless and being truly mobile. Traditional landlines tether employees to their desks, limiting communication and restricting collaboration across teams. But unlike legacy systems, Hosted VoIP is a great enabler of business mobility. If you think your company should gain all the benefits of mobility by simply switching to Hosted VoIP, get in touch with us today!

Learn more about GoToConnect

GoToConnect combines the power and reliability of Jive's phone systems with GoToMeeting's web, audio and video conferencing for one simple, fast and easy-to-use solution. Call, meet and message your way with 100+ powerful Hosted VoIP features that keep everyone in your business connected, wherever they are.
